

Characteristics of Matched Seniors

University of Minnesota Medical School

This is a confidential report developed by the NRMP. It is intended for use by designated medical school officials. The NRMP will not release these data to third parties, and medical schools are urged to ensure the confidentiality of information that could identify individual students.

The report for your school contains tables for all of the following 29 specialties to which your students matched. Each table compares data on your matched seniors with the 25th, 50th, and 75th percentiles for all medical schools. Data for the 2015, 2016, and 2017 Matches have been combined to produce this report.

For characteristics 1 through 9, the percentiles represent the distribution of school means by specialty. For USMLE Step scores and COMLEX-USA scores, the percentiles are calculated based on the distribution of matched seniors in each specialty.

Match Characteristics. (1) Number of matched seniors in this specialty; (2) Percentage of class matched to this specialty (based on total number of seniors participating in the Match); (3) Average number of programs ranked; and (4) Average number of programs ranked within matched specialty. Source: NRMP Data Warehouse.

Student Characteristics. (5) Average number of work experiences; (6) Average number of volunteer experience; (7) Average number of research experiences; (8) Average number of publications; and (9) Percentage of matched seniors within this specialty who reported membership in Alpha Omega Alpha (AOA). Data for calculating characteristics 5 through 9 were self-reported by applicants. Source: NRMP Data Warehouse.

USMLE and COMLEX-USA Scores. (10) Average USMLE Step 1 score; (11) Average USMLE Step 2 score; (12) Average COMLEX-USA Level 1 score; and (13) Average COMLEX-USA Level 2 score. Source: NRMP Data Warehouse. Note: Only scores confirmed, corrected, or provided by medical schools were used in the calculations. Between 2015 and 2017, 86 percent and 85 percent of all U.S. allopathic seniors had verified USMLE Step 1 and USMLE Step 2 scores. Osteopathic medical schools participated in the score verification process in 2017, and only 2017 scores are included in this report. Of all U.S. osteopathic seniors, 52 percent and 44 percent had verified USMLE Step 1 and USMLE Step 2 scores, and 85 percent had verified COMLEX-USA Level 1 and Level 2 scores each.

Informed Consent and Institutional Review Board (IRB) Oversight. Data for calculating characteristics 5 through 11 were collected during applicants' Match registration process. Individual data were used only when consent was given for use in research. Between 2015 and 2017, 91 percent of all allopathic seniors and 87 percent of all osteopathic seniors gave consent to NRMP for using their data in research. IRB exemption for the data collection process was obtained from Chesapeake IRB.
